Amendment After Final Serial No. 10/765,899

Attorney Docket No. 032111

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions of claims in the application.

1. (Currently Amended) A layer forming relief for transferring and printing an application fluid

applied on printing convex portions on a printing object, the layer forming relief comprising the

printing convex portions formed as linear strips, adjoining printing convex portions aligned to be

parallel with each other with a prescribed space, and a plurality of micro-projections, formed into

a truncated cone or in a cylinder, distributed on top faces of each of the printing convex portions

so as to form a groove between adjoining micro-projections for retaining the application fluid.

2. (Currently Amended) The layer forming relief according to Claim 1, wherein the application

fluid is an organic luminous substance, the micro projection is formed into a truncated cone or a

eylinder, and the height of the micro-projection is in the range of 2 to 50 µm, the diameter of the

top face of the micro-projection is 5 µm or more, the space between the adjoining micro-

projections is 7 μm or more, and the number of the micro-projections is in the range of 2 to 30

and is formed so as to be distributed in the width direction of the top face on the printing convex

portion.

3. (Currently Amended) A layer forming relief for transferring and printing an application fluid

applied on top faces of printing convex portions on a printing object, the layer forming relief

comprising the printing convex portions formed as linear strips, adjoining printing convex

portions aligned to be parallel with each other with a prescribed space, and a plurality of

projected micro-stripes distributed on the top faces of each of the printing convex portions so as

to form a groove between adjoining micro-stripes for retaining the application fluid,

wherein a cross section of the projected micro-stripes in a direction perpendicular to a

longitudinal direction is trapezoidal or rectangular.

4. (Currently Amended) The layer forming relief according to Claim 3, wherein the application

fluid is an organic luminous substance, the cross section of the projected micro-stripes in a

direction perpendicular to a longitudinal direction is trapezoidal or rectangular, and the height of

the projected micro-stripe is in the range of 2 to 55 µm, the width of the top face of the projected

micro-stripe is 3.5 µm or more, the space between the adjoining projected micro-stripes is 7 µm

or more, and the number of the projected micro-stripes is in the range of 2 to 33 and is formed so

as to be distributed in the width direction of the top face on the printing convex portion.

5-8. (Cancelled).
